#### **EDUCATION**

Northeastern University, Boston, MA

December 2018

Master of Science in Computer Science

Christ University, Bangalore, India

May 2014

Bachelor of Computer Application

## **EXPERIENCE**

## Goldman Sachs, Jersey City, USA

April 2019 – Present

Software Engineer

- Content Tool | Conceptualized, proposed and led the development of a full stack web app using Node.js, React.js,
   Java and other in-house tools to automate fact card generation thereby saving the firm an estimated \$1.5 million / year
- **Fixed Income Automation** | Single handedly interacted with users to design complex server-side code in Java to automate report generation saving 400+ days of work annually by onboarding 21 reports over 6 months
- Client Reporting Platform | Lead the dev work and manage 4 support staff worldwide for handling daily / monthly posting of 1000+ ETFs and MFs to GSAM.com by retrieving, aggregating and implementing biz logic to financial data

VMware, Bangalore, India

July 2014 - May 2016

Analyst and Web Developer

- Developed and supported MS SharePoint based web applications used company-wide by 20,000+ employees
- Received the Go Getter Award H2 2015 for engineering a reward-based website for the Worldwide Biz Ops team

# PROJECTS AND HACKATHONS (CLICK TO FOLLOW)

## Slick [ | Northeastern University | December 2018

Revolutionized an industrial socket broadcast messaging system into a modern-day Java based CALEA compliant
messaging platform hosted on AWS EC2. With the git master branch being protected by a high bar of >85% test
coverage on SonarQube to pass the Jenkins build and PR approvals, Slick turned out to be a robust system.

# news-map.io 🗗 | hackNY 2018 | September 2018

 Hacked a web app that aggregates different news sources using Python on a map built with deck-gl and D3.js to provide location-based trends in current events and a sentiment analysis on each article using IBM Watson NLU to categorize each source's view and help users recognize bias and prevent misinformation

## Autometa Northeastern University | August 2018

• Created an Android app to provide an automated geo-based reminder and SMS service. Users entering within the radius of a chosen location or location category will automatically 'trigger' the selected action after a 60 second timer

#### UniChat [ | Northeastern University | April 2018

 Developed a MEAN stack platform that lets users chat with each other in 15 languages. Messages are translated using IBM Watson Language Translator and have associated positive/neutral/negative sentiment to give a better sense of the translations. Sentiment analysis is done using IBM Watson Natural Language Understanding

## Information Retrieval System 🗹 | Northeastern University | December 2017

 Hypothesized the retrieval effectiveness of BM25, TF-IDF, Lucene and Smoothed Query Likelihood Model as retrieval models for a search engine with multiple running parameters using Python

#### Tabbd 🗗 | August 2017

• Innovated a bundled Android app and Google Chrome extension that syncs links between phone and PC in real-time using Google Firebase providing option to open individual links or open all in separate tabs

### **TECHNICAL SKILLS**

Primary Languages: Java, JavaScript, Slang, SQL

Technologies: Spring MVC, Node.js, Express.js, AngularJS, React.js, Jenkins, JUnit, SonarQube, jQuery

Cloud Platforms: AWS, Heroku, Google Cloud Platform

Databases: MySQL, Oracle, SQLite, MongoDB, Elasticsearch, AWS RDS

#### LEADERSHIP EXPERIENCE

- Student Ambassador for Jumpstart at Northeastern University (August 2018 January 2019)
- Volunteered to help a non-profit organization to port their native web system to an Angular S frontend (Summer 2018)
- Appointed Single Point of Contact at VMware for transition of MS SharePoint from version 2007 to 2013 for 5+ teams
- Headed international project collaboration of 100+ students with University of Applied Sciences FHWS, Germany
- Elected University Placement Representative and University Student Council Representative during undergrad
